# Development of tether-in-space technology for propellant-less propulsion and artificial gravity

Anese Giovanni - 39th Cycle

Supervisor: Prof. Enrico Lorenzini

Admission 2<sup>nd</sup> year - 16/09/2024

## Tethered satellites

- Electrodynamic Tethers (EDTs)
- Momentum Exchange Tethers (METs)
- Artificial Gravity Spinning System (AGSS)

Software development for simulation.

## Tethered satellites

- Electrodynamic Tethers (EDTs)
- Momentum Exchange Tethers (METs)
- Artificial Gravity Spinning System (AGSS)

Software development for simulation.

Electrodynamic Tethers (EDT)		Deployment
Passive	Active	
Environmental forces Current routine	Environmental forces	/
Power input Cathode control	Current routine Power input Cathode control	Control based on a reference deployed length and length rate profiles  Lumped masses  Tension-Damping routine

# E.T.PACK-F project

Orbit inclination [deg]	51.5	51.5
Starting altitude [km]	600	550
Altitude limit [km]	250	250
$m_1$ (EEM) [kg]	12	12
$m_1$ (DMM) [kg]	12	10
Alluminum length [m]	450	410
Peek length [m]	50	10
Thickness Al [m]	4e-5	4e-5
Thickness PEEK [m]	5e-5	5e-5
Width [m]	2.5e-2	2.5e-2
$I_{max}$ [mA]	500	500
$I_{min}$ [mA]	200	300
DVc [V]	30	30
P [W]	0.0	4.0
Duty cycle [% of orbital period]	100	30
Cathode life [hours]	$\infty$	216

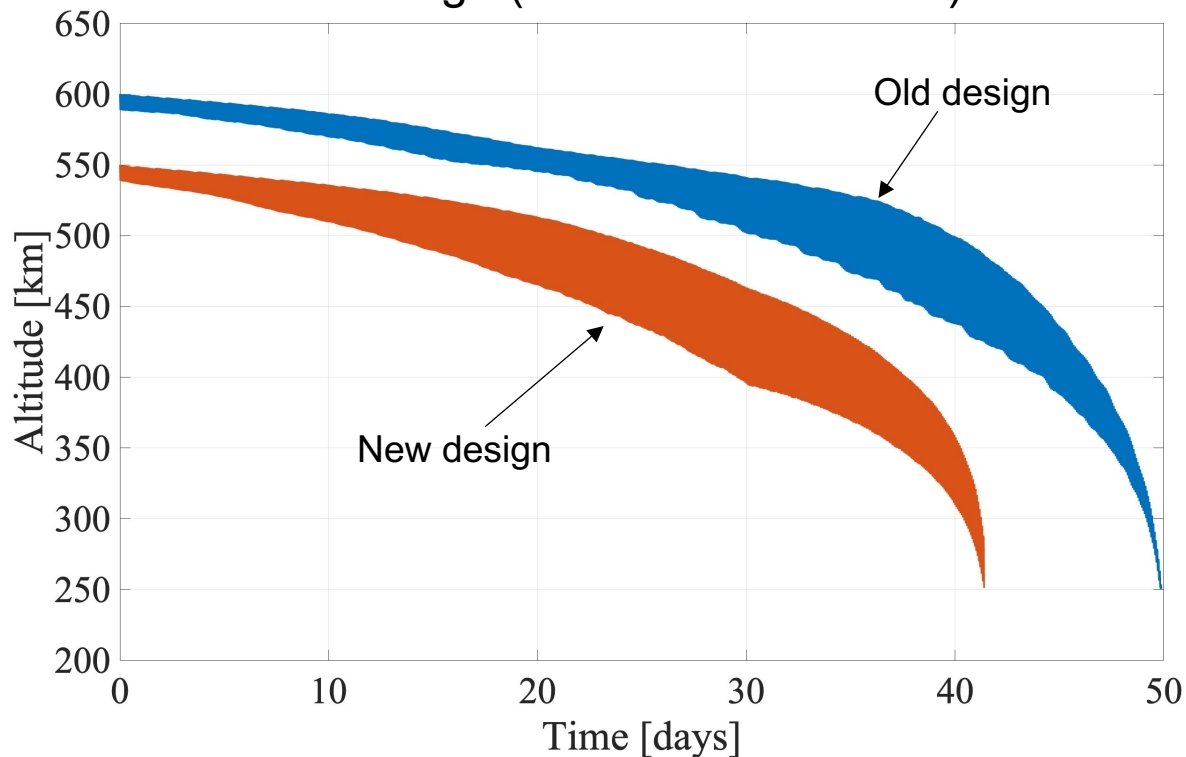

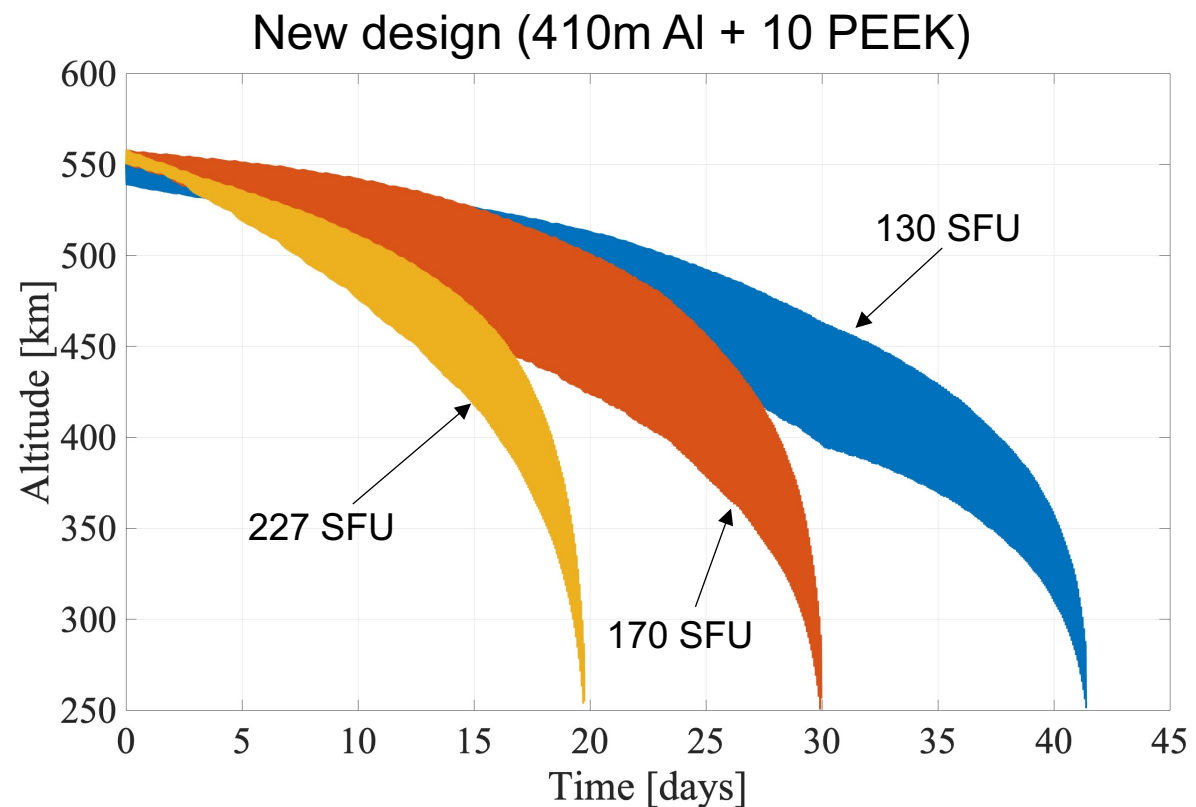

Old design (450m Al + 50 PEEK)

VS

New design (410m Al + 10 PEEK)

@ mean solar activity (F10.7  $\approx$  130 SFU)

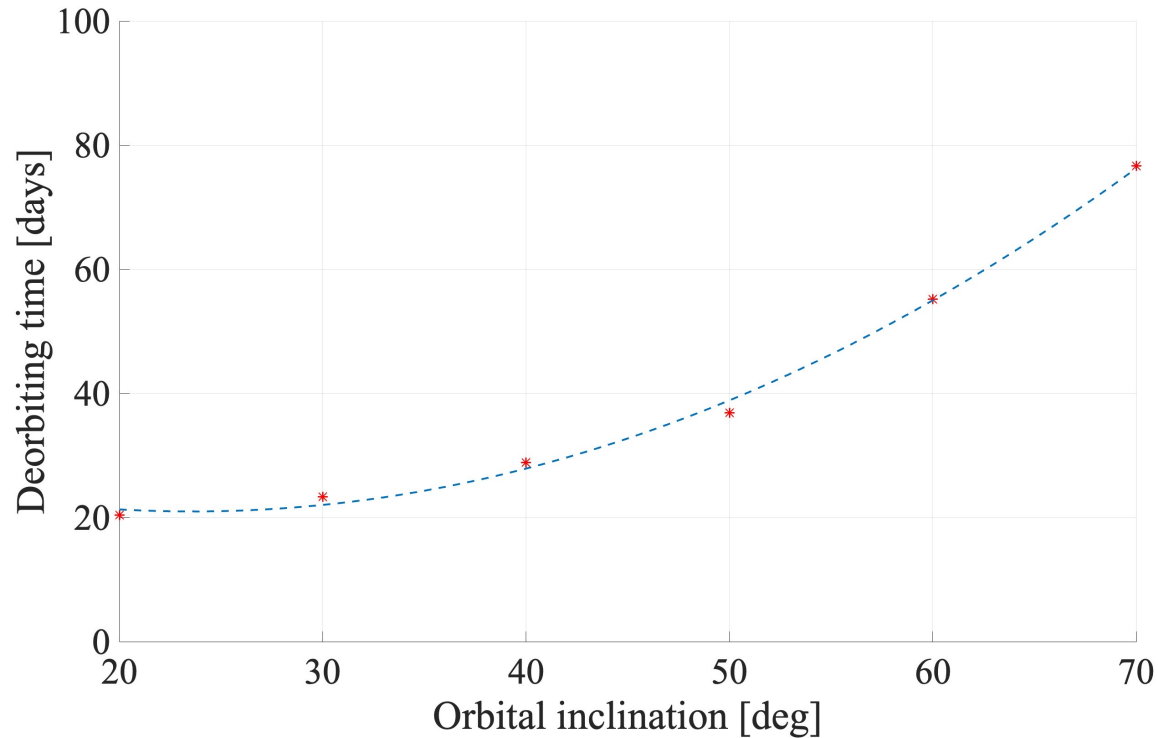

# Analysis of Deorbiting relative to different factors with EDT

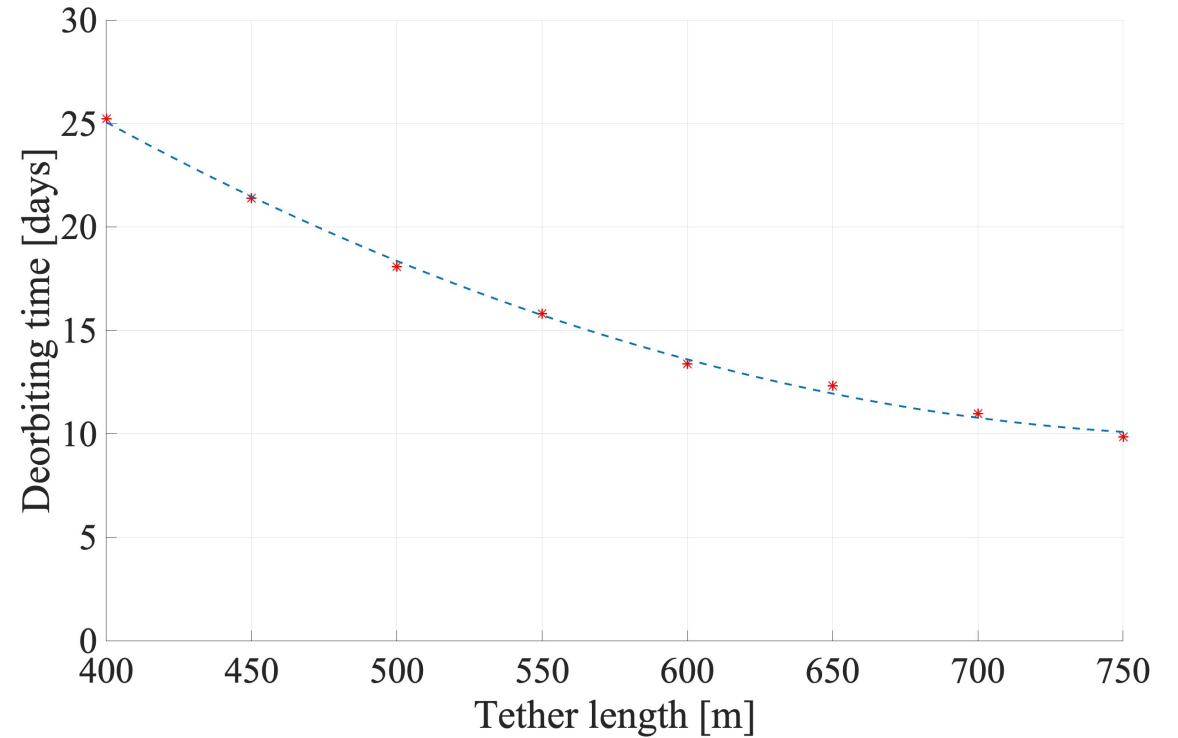

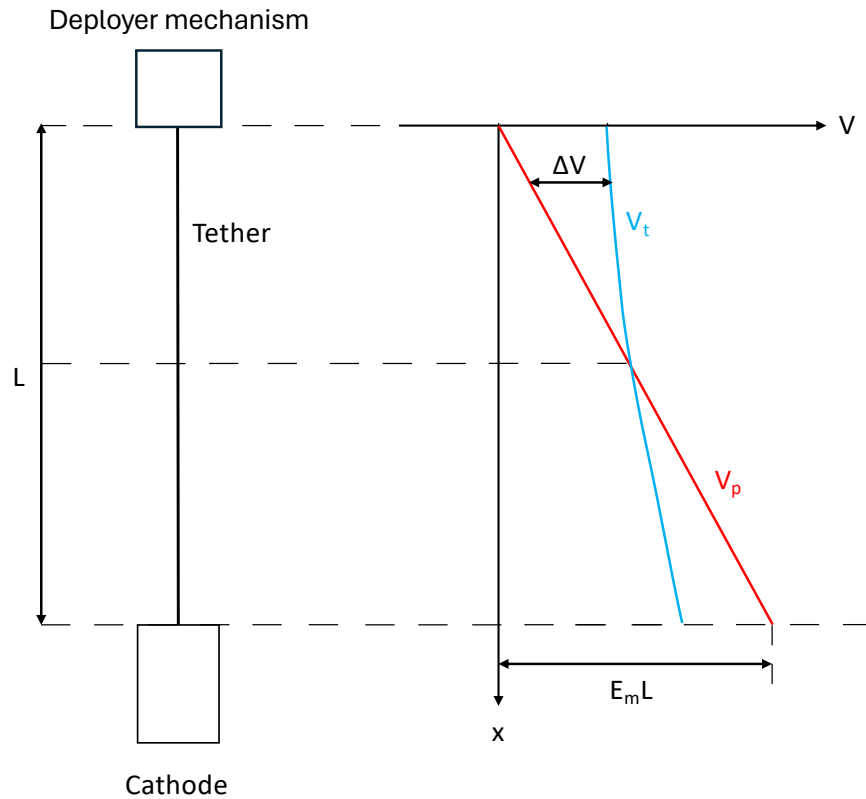

# Deorbiting with EDT

Tether: 450 m Al, 50 m PEEK  
High solar activity

Medium inclined orbit  
High solar activity  
Tether: 90% Al, 10% PEEK

# Effects of power supply

# Tethers for Reboost

- Electro dynamic tether (EDT) architecture
- Thin film of solar cells
- Solar cells harvest power when illuminated by solar rays
  - Fully autonomous system

Study the ISS reboost  
(increase the semimajor  
axis of 4 km in 30 days)

	$F_D = 0.4 N$	$F_D = 0.8 N$
$L_t$	15.00 km	15.00 km
$f_i$	97.6%	97.0%
$L_{pv}$	14.64 km	14.45 km
$\eta_{pv}$	4.23 %	7.23 %

# Bare Photovoltaic Tether

$$F_D = 0.4 N$$

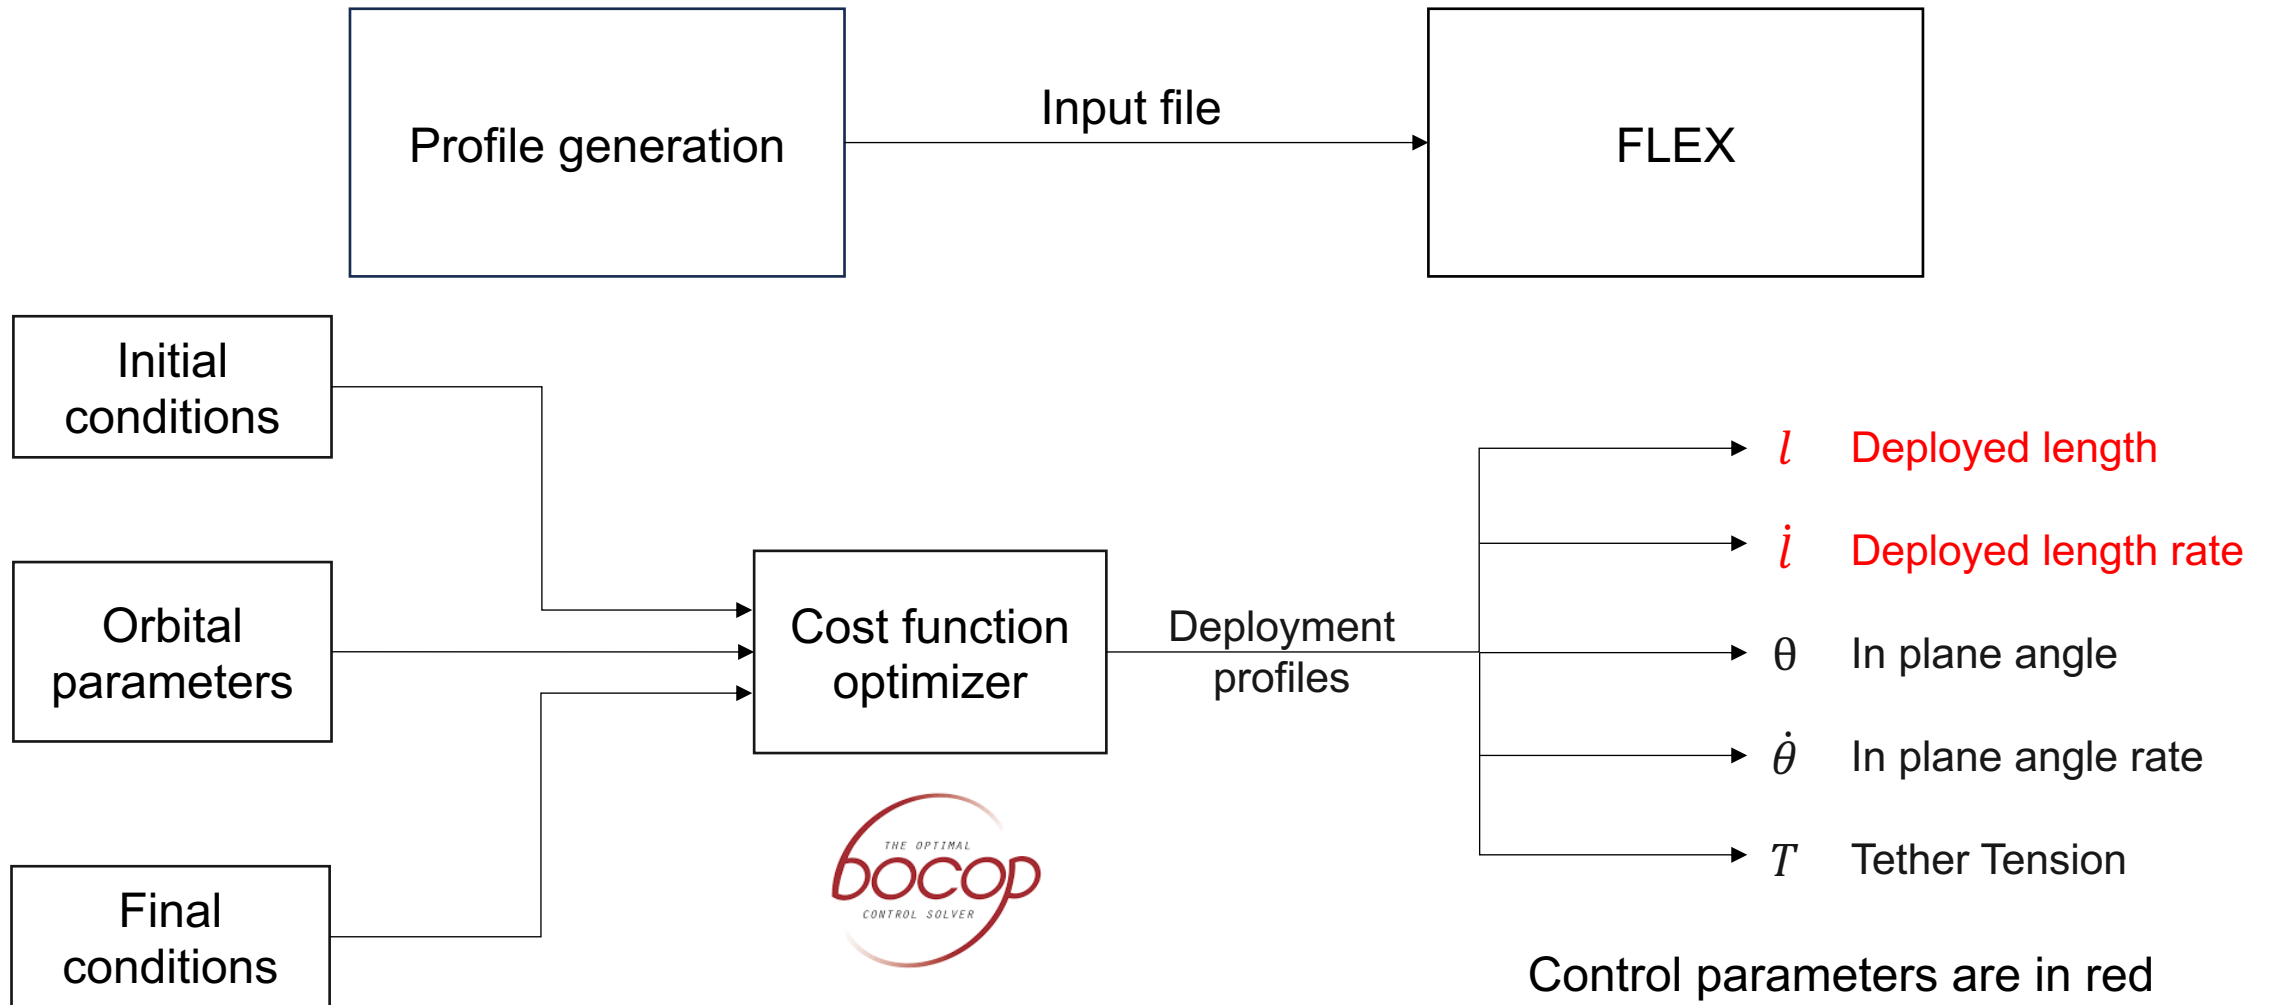

$$F_D = 0.8 N$$

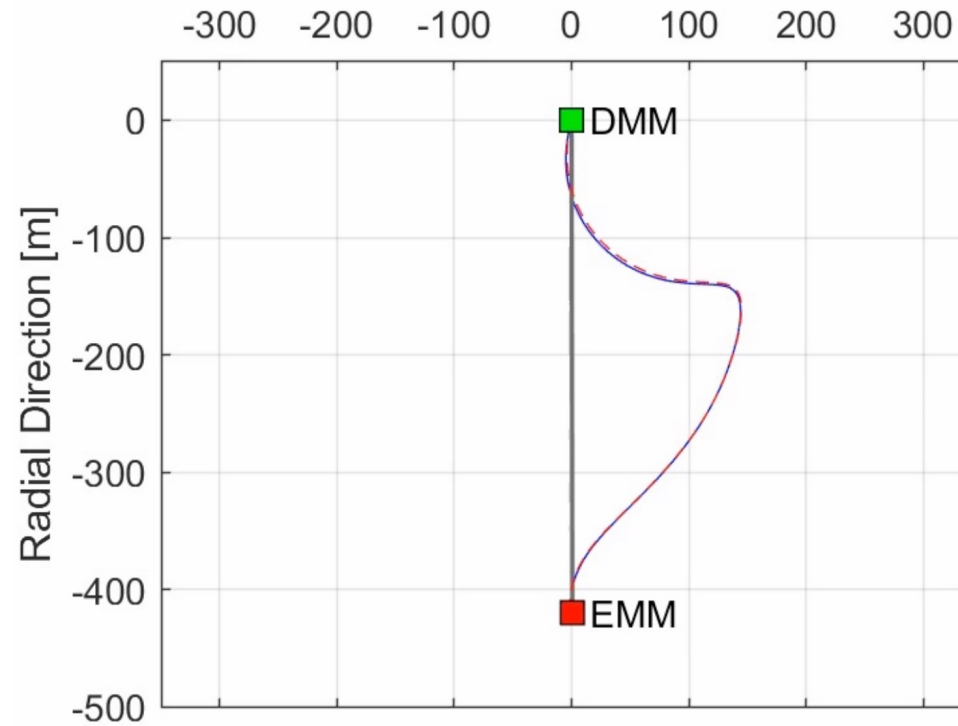

# Deployment phase

**Trajectory**  
Time: 3590.00 sec  
Flight Direction [m]

**Trajectory**  
Time: 3590.00 sec  
Flight Direction [m]

--- Reference Trajectory
