Aerospace Technologies for Earth Monitoring and Observation

Federico Toson - 38th Cycle

Supervisor: Prof. Carlo Bettanini

Co-Supervisor: Prof. Giacomo Colombatti

3° year admission - 16/09/2024

Motivation: Environmental safeguard

State of Art: Ground and satellite technologies for Earth monitoring

Use of previous technologies for remote sensing studied by the research team (AREO, MINLU, OZONE)

Improvement and versatility not only in analysis and monitoring but also in context (area, heights, hosting vehicles)

Multiple subsystems

Rapid prototyping

Autonomous payload

Additive printing

SAT data integration and validation

Three possible solutions:

- **Drones:**
 - High ground resolution
 - Limited time window
 - Easy access
 - Defined ground track
- **Stratospheric Balloons**
 - Large area of analysis
 - Extended time window on different target area
 - Variable ground track (atmospheric wind dependant)
- **Tethered Balloons**
 - Extended time window on specific target area
 - High ground resolution

Healthy Leaf

Stressed Leaf

Dead Leaf

$$NDVI = \frac{NIR - Red}{NIR + Red}$$

$$GNDVI = \frac{NIR - Green}{NIR + Green}$$

$$NDRE = \frac{NIR - RE}{NIR + RE}$$

$$ENDVI = \frac{(NIR + Green) - 2Blue}{(NIR + Green) + 2Blue}$$

Constellation of 130+ CubeSat in SSO

(revisit time of 24h on the field, at 9 am LT)

8 satellites' operative bands (ground res. 3,2 m):

- Coastal Blue (431 - 452 nm)
- Blue (465 - 515 nm)
- Green I (513 - 549 nm)
- Green (547 - 583 nm)
- Yellow (600 - 620 nm)
- Red (650 - 680 nm)
- Red-Edge (RE) (697 - 713 nm)
- Near-Infrared (NIR) (845 - 885 nm)

- Basler ace 2 (IMX546 8MP CMOS by Sony)
 - monochromatic camera
 - colour camera
- FLIR Vue Pro R
- Apeman "Space cam"
- Two main optical solutions

	Focal Length	Angle of View	FOV @ 50 m height
Kowa LM35HC	35 mm	13°	12 x12 m
Tuss LYM0814	8 mm	70°	100 x 100 m

Federico Toson

Aerospace Technologies for Earth Monitoring and Observation.

- SQM-L (Sky quality meter)
- Air composition sensors
- GPS system

RAW image in RGB TB filter (475, 550, 850 nm)

Slides credits to Carlo Bettanini

GNDVI computation

- New 3D structure
- Modular approach
- New field test campaigns
 - Water stress
 - Wine yard diseases
 - Light Pollution
- Stratospheric flights
 - Attitude and Dynamics reconstruction

- **DAFNAE & TESAF:** Crops monitoring study
(currently in progress)

- **University of Pisa:** Stratospheric balloon launches
(October 2024)

UNIVERSITÀ DI PISA

- **University of Chile:** Light Pollution research
(November 2024)

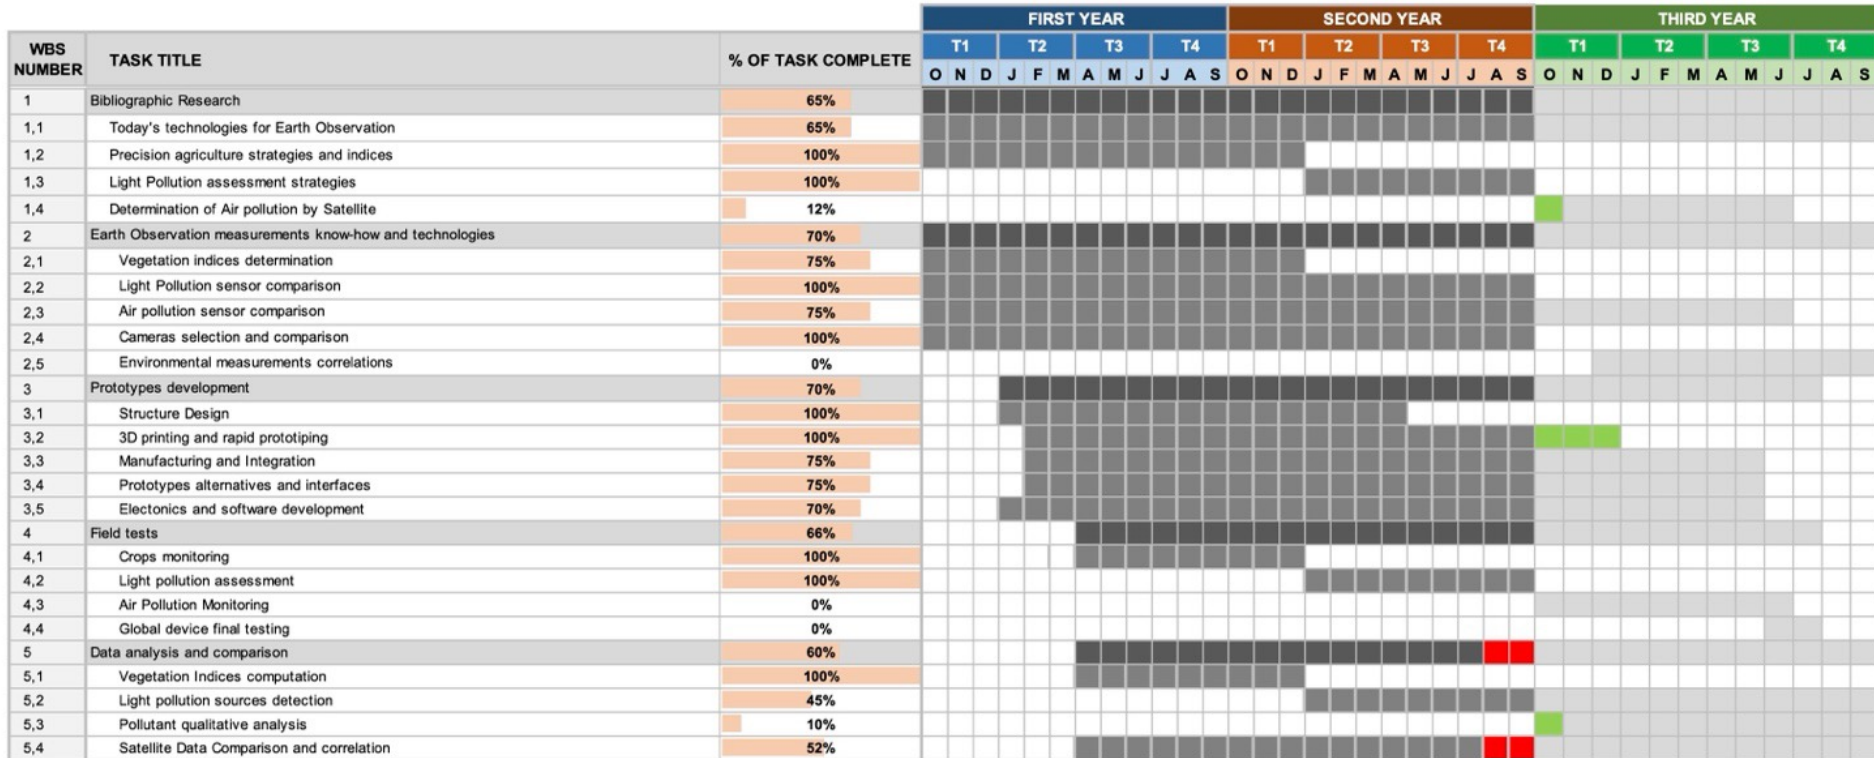

- **Officina Stellare:** Sat observation data
(2025 TBD)

- **ESA Earth Observation office**
(2025 TBD)

Federico Toson

- New configuration developed and field tested
- Data analysis of last test campaign and SAT data integration in progress
- Design, development and calibration of the Light pollution assessment payload for Chile flight campaign
